---

Ladies and Gentlemen,

I was wondering if this could be brought to the commission's attention, as far a closing Zone D-7 for DEER ONLY. This would be only for a 5 year time frame though, to let the deer population regenerate. As I was hunting up there this year and talking to with a lot of hunters that been up in the area. The hunters have been saying it has been like this for years, and it is just getting worse. As I walk all over the area up there by Deer Lake, Hoffman meadows, and by MT. Tom, I have only seen doe's. That seems to be what a lot of people see up there too. As you get the deer reports from your geologist and how low the buck (male deer) population is. I feel this would help out the deer population to grow and be better. You could still keep it open for bear hunting though, as bear population is way more over whelming then the deer population.

Thank you,  
V/R
